

5W Solar LED Wall Pack

Applications

Quickly install ELEDLIGHTS Solar LED Wall Packs anywhere you need lighting—no wiring, no connection to an external power source required. Each light provides the equivalent brightness of a 40W halogen flood lamp and comes on automatically as soon as motion is detected nearby, deterring burglars and keeping you and your family from stumbling around in the dark. For power, this LED light uses a solar panel that charges during daylight hours. The fixture's durable enclosure is IP65-rated for outdoor use. Mount the fixture anywhere where daytime sun can charge the battery. Fixture is installed using two mounting holes that make installation as simple as hanging a picture.

Features

- IP65 housing
- 5000K Cool White Light
- 3 operation modes
- No wiring required
- Zero energy cost
- Motion activated
- Ideal for where electricity isn't available
- Easy installation on sheds or garages
